Quadratic Equation & h,k form for vertex; Make the layout of the coordinate plane fit their parabola (flight pattern) you do not want them using awful numbers. This will slow them down and make the answers to the above hard to grade due to the inconsistent estimates. Make them check with you before they finalize putting it on the coordinate plane.

In this project students will graph quadratic functions based on the popular game, Angry Birds, by using equations and a Web-based graphing tool. Students will work in groups to apply the same principles to create their own game that uses quadratic functions. Students will exchange games with other groups, play the game and assess that game using a set student rating scale.

Quadratic Angry Birds: The Game - GeoGebra

Yellow Bird's flight path can be modeled by the quadratic equation:
 $y = -x^2 + 14x - 24$. Max: 25 yards. Axis of symmetry: 7 yards. Distance traveled: 10
yards. Since the graph is given you just need to square the axis of symmetry (13)
to get 169. Then you need to plug it into the vertex equation to get $-y = 13/169$
(x-0) (x-26)
