Archimedes' Principle Gizmo : Lesson Info : ExploreLearning

Archimedes' principle, physical law of buoyancy, discovered by the ancient Greek mathematician and inventor Archimedes, stating that any body completely or partially submerged in a fluid (gas or liquid) at rest is acted upon by an upward, or buoyant, force, the magnitude of which is equal to the weight of the fluid displaced by the body. The volume of displaced fluid is equivalent to the volume of an object fully immersed in a fluid or to that fraction of the volume below the surface for ...

This law, called Archimedes' principle, has two consequences: If an object floats, its mass is equal to the mass of the displaced water. If an object sinks, its volume is equal to the volume of the displaced water. Archimedes Principle Gizmo Answers.

Archimedes' principle | Description & Facts | Britannica

While historians are unsure about the truth of the Eureka legend, it is certain that Archimedes discovered the principle of buoyancy: an object immersed in a fluid experiences an upward force equal to the weight of the displaced fluid. Students can explore this law in the Archimedes' Principle Gizmo. In the Gizmo, students can vary the dimensions and mass of a "boat," see how this affects the buoyant forces on the boat, and determine whether the boat floats or sinks.
