Fold (geology) - Wikipedia

Lisle, R. J., 2004, Geological Structures and Maps, A Practical Guide, Third edition maps of the Earth surface, and azimuth commonly refers to incremental measures in Brunton Pocket Transit. 2 Bedding and other geological layers and planes that are not horizontal are said to dip. The dip is the slope of a geological surface. There are

Bing: Geological Structures And Maps Lisle

In structural geology, a fold is a stack of originally planar surfaces, such as sedimentary strata, that are bent or curved during permanent deformation.Folds in rocks vary in size from microscopic crinkles to mountain-sized folds. They occur as single isolated folds or in periodic sets (known as fold trains).Synsedimentary folds are those formed during sedimentary deposition.

The purpose of this chapter is to provide a geological and geomechanical understanding of fracture formation, characteristics of various fracture types, network patterns, and internal structure. The geometry of fractures, their internal architecture, and present-day state of stress control fluid flow in fractured rocks. A geomechanical understanding of these properties provides an intellectual
