Magnetização. Na presença de uma excitação magnética \rightarrow , os vários momentos magnéticos eletrônicos ou nucleares - ou seja, os dipolos atômicos - vão dividir-se em diferentes orientações segundo os níveis de energia que lhes sejam mais convenientes. A forma como a matéria responde à estimulação magnética depende entretanto não apenas do comportamento individual destes dipolos

Textbooks. The textbook for the course is the world-famous, excellent, but sometimes hard-for-students-to-read book by J. D. Jackson: Classical Electrodynamics, Third Edition, by John David Jackson, John Wiley and Sons, (1998). This is the book with the blue hardcover, where he changed to SI (System-International or meter-kilogram-second-ampere) units for the first 10 chapters.

In this section, we will describe the merits and demerits of each of the interpretations in Table 2. Beyond these interpretations, we will also discuss two other types of interpretations of mass-energy equivalence that do not fit neatly in Table 2. First, we will discuss Lange's (2001, 2002) interpretation, which holds that only mass is a real property of physical systems and that we convert

Geschiedenis. De wetten werden in 1865 geformuleerd door James Clerk Maxwell met 20 vergelijkingen in 20 variabelen. In 1884 werd een veel kortere notatie, die gebruik maakte van vectoranalyse, geïntroduceerd door Oliver Heaviside en Josiah Willard Gibbs. Heaviside leidde uit de wetten van Maxwell de telegraafvergelijkingen af: twee formules die het gedrag van elektrische signalen in een

Classical Electrodynamics is a textbook about that subject written by theoretical particle and nuclear physicist John David Jackson. The book originated as lecture notes that Jackson prepared for teaching graduate-level electromagnetism first at McGill University and then at the University of Illinois at Urbana-Champaign. Intended for graduate students, and often known as Jackson for short, it

A permeabilidade magnética mensura o campo magnético no interior de um material - devido ao campo magnetizante → pré-existente na região onde o material é colocado bem como à magnetização por este induzida no material - em relação ao próprio campo magnetizante → em questão.. Ao colocar o material no local considerado, no interior deste material verifica-se a presença de um
