The coil jumper lead will have to be removed to turn off the engine if it starts. Make sure you have water hooked up to a flushett to the drive in case it starts. We use a jumper wire to jump a positive to the starter solenoid terminal (small yellow with red stripe) to get the engine cranking. Hopefully one of these items will reveal the problem.

IMO there is nothing to single out mercruiser regarding problems. Merc and volvo which make up > 90% of the sterndrive market use the same GM gas long blocks. If you have read engine problems folks have posted the majority of issues come from

lack of maintenance, not replacing worn out manifolds, raw water impellers are the top.

### **Service & Support | Mercury Marine**

The Mercruiser has inspection ports on the front of the exhaust manifolds. Remove the ports and visually inspect them for deposits that would restrict the water flow. Remove the manifolds if they appear clogged. Use a metal rod to knock rust and deposits loose from the interior of the manifolds and flush with water.

First up, do your own compression test. This engine is a standard Chevy small block, nothing complicated. Just treat it like you would a car engine. Next is to determine why there is no compression. Could be a gasket, a valve or rings. Use a leak down test to determine that. Once you know what the problem is, we can guide you with getting it corrected.
